Skills:
Soft Skills, Research, Article Writing, Linux, Windows, Azure, Microsoft Sentinel, KQL, GitHub, Azure DevOps, SOC Analyst, SOC Engineer, ISO 27001, Gap Analysis, Firewalls, Fortinet, Networking, Risk Management, Virtual Machines, CIS Benchmark, SSDLC, Nessus, OWASP Top 10, SAST, DAST, IAST, SCA, Demo Presentation, Semgrep, Black Duck, SonarQube, OWASP SAMM.

João Videira

Cybersecurity Consultant with hands-on experience across Application Security, GRC, and SOC operations. Specialized in AST tooling, from implementation and fine-tuning to CI/CD integration, with additional depth in ISO 27001 compliance, incident detection engineering, and vulnerability management. Comfortable leading client-facing engagements, training technical teams, and translating security findings into actionable outcomes.

Work experience

Cybersecurity Consultant Nov 2023 – Sep 2026

- **Software Development:** Delivered custom Python-based enhancements to open-source security tools for client environments, including DefectDojo, extending functionality to match specific vulnerability-management workflows and client requirements.
- **AST Tools:** Company specialist for Application Security Testing tools, with deep focus on the Black Duck portfolio alongside Semgrep and SonarQube. Led demos, implementations, fine-tuned the tools to reduce false positives and integrated AST tooling into CI/CD pipelines as part of SSDLC initiatives.
- **Training:** Trained client development teams on vulnerability management platforms, AST tooling, and security best practices.
- **GRC:** Led ISO 27001 Gap Analysis and implementation engagements, working directly with clients to design and document the procedures and policies required for certification and ongoing compliance.
- **SOC:** Worked as both SOC Analyst and SOC Engineer: triaged security incidents, built and tuned detection rules in Microsoft Sentinel to catch new incidents and cut false positives, and built dashboards to speed up analyst triage.
- **Vulnerability Management:** Implemented vulnerability management policies and retested findings from pentests and scans, classifying them as false positives, active or mitigated.
- **Maturity Assessment (Supporting):** Supported an OWASP SAMM maturity assessment, contributing to the evaluation of client software security practices against the model's domains.
- **Pentest (Supporting):** Supported penetration tests during enumeration phases, identifying and flagging weak points for the lead pentesters to investigate further.

Education

Degree in Computer Engineering Sep 2020 – Sep 2023
Instituto Politécnico de Castelo Branco

Master in Cybersecurity Sep 2024 – Present
Faculdade de Ciências da Universidade de Lisboa

Certificates

- CompTIA Security+
- CCNA: Introduction to Networks
- CCNA: Switching, Routing, and Wireless Essentials
- CCNA: Enterprise Networking, Security, and Automation
- Palo Alto Networks: Enterprise Security Management-IPCB-02/20/23
- ISO/IEC 27001:2022 Lead Auditor (from Mastermind)
- CSIRT in a Box: Initial Training for Incident Response Teams
- OWASP SAMM Fundamentals

Published articles

- Challenges and Opportunities of Automated Vulnerability Assessment in Industry 4.0 (Published in IEEE journal in 2026)
- Detecting and Monitoring the Development Stages of Wild Flowers and Plants using Computer Vision: Approaches, Challenges, and Opportunities (Published in IJAIN journal in 2023)
- A Mobile Application for Detecting and Monitoring the Development Stages of Wild Flowers and Plants (Published in Informatica journal in 2024)
- Types of SQLi (Paged Out! Issue #7)

Projects and languages used

- **Java:** Projects involving file manipulation, inheritance, polymorphism and the application of Patterns. As well as the development of the application published in Informatica magazine.
- **Python:** Small projects involving file manipulation, as well as developments in Django applications.
- **HTML, CSS, PHP and JSP:** Creating a website for a restaurant.
- **Solidity:** University project involving ERC20-based DeFi lending protocol with ETH/DEX swaps and NFT/token-collateralized loans, deployed to Sepolia via Remix/MetaMask. Also self-taught through CryptoZombies and Cyfrin's Solidity and security courses.
- **Assembly:** People counting program for a supermarket to avoid crowds (due to COVID-19).
